Abstract:

A pneumatic paintball marker adapter kit for use with a plurality of pneumatic paintball markers, each marker having a back portion and a front portion, the back portion being adapted to receive a paintball, the front portion being adapted to detachably connect with a barrel to discharge a paintball through the barrel, and the plurality of markers having front portions of different sizes. The kit has a universal barrel with a hollow, elongated cylindrical tube, a paintball discharge muzzle end, a breech end and a connection means at the breech end. The kit also has a plurality of adaptors, each having a body with a hollow cylindrical tube, a marker end adapted for connection with the front portion of a marker and a barrel connection adapted for detachable connection with the breech end of the universal barrel, wherein the body has an internal diameter equal to the internal diameter of the universal barrel. The barrel connection of each adapter is the same size, for connection to the breech end of the universal barrel, and the marker end of each adapter is of a different size for connection to the plurality of markers having front portions of different sizes. The universal barrel is substantially longer than the adaptors. A plurality of removable tubular barrel sleeve inserts are adapted to be inserted within the adaptors and the universal barrel and to extend an entire length of an assembly of the universal barrel and an adaptor, each insert includes a hollow elongated cylindrical tube with an inside diameter and an outside diameter, the outside diameter being slightly smaller than the internal diameter of the universal barrel and the adaptor to form a continuous path for the projection of a paintball discharged from the paintball marker. A plurality of muzzle extensions of various lengths, each muzzle extension having a hollow cylindrical body, a discharge end to discharge said paintball and a muzzle end adapted for connection with the muzzle end of the universal barrel.
